## About HandyAudit

HandyAudit is a revolutionary new hand hygiene auditing technology that reduces subjectivity to produce objective, consistent, and accurate hand hygiene compliance measurements.

Auditors record hand hygiene behaviour using a touchscreen audit tool. This information is sent to a server where the evidence is analyzed and reports are generated at the touch of a button.

The HandyAudit hand hygiene auditing system results in accurate measurements and rich supporting data which promote evidence-based decision making and empowers organizations to improve the quality of patient care.

## Objectivity

Auditors record actions that they see.

Existing tools are subjective. Auditors must continuously apply a complex set of rules and determine compliance on the spot. With HandyAudit, auditors simply monitor and record actions.

## Consistency

HandyAudit measures compliance consistently.

Using this record of individual actions, HandyAudit uniformly applies hand hygiene standards to calculate results. The system consistently determines hand hygiene compliance throughout units and facilities, allowing for seamless inter-unit and inter-site comparisons.

## Accuracy

Using objectivity to consistently produce accurate, reliable results.

HandyAudit consistently applies rules to an objective record of actions and accurately calculates hand hygiene compliance. Access to reliable hand hygiene data also facilitates evidence-based decision making at the clinical and managerial levels, giving unparalleled opportunities to increase compliance, improve patient safety and increase quality of care.

## Why Use HandyAudit?

HandyAudit is academically validated, used in over 80 hospital sites, and offers benefits across many areas:

### *Institutional*

- Improve clinical decisions and ultimately increase patient safety and quality of care through HandyAudit's accurate and quick feedback.
- Benchmark against peer organizations with more confidence using HandyAudit's objective indicators.

### *Financial*

- Eliminate costs of transcription and manual analysis.
- Gain accurate information to allocate scarce resources where they count the most.
- Reduce infection-associated costs by targeting hand hygiene problems identified through HandyAudit's immediate feedback and accurate measurements.

### *Decision Support and IT*

- Empower clinical managers to help themselves with HandyAudit's automatic data analysis and easy report generation.
- Integrate HandyAudit with existing tools with only minimal set up.

### *Infection Control*

- Minimize auditing subjectivity for infection control managers with a peer-reviewed, standardized hand hygiene auditing tool.
- Obtain high quality measurement and be able to provide timely feedback to units and facilities.
- Access rich analytics useful for developing targeted hand hygiene initiatives.

### *Auditing*

- Reduce workload and increase convenience. Simply record actions and the system does the rest.
- Improve job satisfaction with an objective, evidence-based tool that helps to show people exactly where they went wrong -- or what they did right!
